

PROSYS OPC UA JAVA SDK

Prosys OPC UA Java SDK enables efficient development of OPC UA clients & servers, and also applications such as data acquisition, monitoring, user interfaces, device diagnostics, etc. The components allow you to concentrate on the application design instead of communications, which will reduce the development time and cost. The reliability and usability of the components has been verified and the components take care of important communication details.

PROSYS SENTROL

Prosys Sentrol is a leading OPC Client and Server SDK (software development kit) enabling efficient and reliable OPC development. Sentrol is tested for OPC Compliance, which ensures that your applications will also be compliant to the OPC specifications. Sentrol will minimize OPC development time and cost, and when you create royalty free, compiled OPC applications you will maximize cost savings at OPC application distribution and installations. Sentrol is available for Windows development tools Delphi and C++ Builder.

PROSYS OPC2DB

Prosys OPC to Database [OPC2DB] is a Windows application used for logging data from OPC servers to databases. OPC2DB is designed for ease of use and reliability in operations. It is quick to install and simple to configure. It allows unlimited number of OPC connections, OPC items, database connections and database tables. OPC2DB can be run in Windows operating system, which has any Edition (Express, Workgroup, Standard, Enterprise) of Microsoft SQL Server 2005 installed.

PROSYS OPC CLIENT

Prosys OPC Client
A free test client for OPC server connections.
Windows operating systems.

PROSYS OPC SIMULATION SERVER

Prosys OPC Simulation Server
A free simulation OPC server for testing and application development assistance.
Windows operating systems.

PROSYS OPC

"The most impressive aspect of the whole experience was perhaps how well Sentrol fitted into the expected Delphi way of working. The model for connecting visual controls to OPC items was completely intuitive, especially for anyone with any experience of using Delphi for database work. The progress which can be made without any hand coding is truly impressive."

OPC Programmers' Connection

"We are developing reliable software systems that use various automation devices from different vendors in a 24/7 environment. Prosys Sentrol has enabled us to create new applications and extend the functionality of other off-the-shelf control center applications very easily in ways that were previously not possible with a reasonable effort. We have been most pleased with the reliability of the product."
